

UJJAL BASNET

SOC Analyst | Cybersecurity Enthusiast | Threat Detection & Monitoring

+977 9849496614 | ujjalbasnet869@gmail.com | linkedin.com/in/ujjalbasnet69 | github.com/ujjal5454

SUMMARY

Cybersecurity-focused Computer Science graduate (2022–2026) with hands-on experience building and operating a home Security Operations Center (SOC) lab, including SIEM deployment, log analysis, and attack simulation mapped to MITRE ATT&CK. Skilled in threat detection using ELK Stack, Splunk, and Wireshark, with a strong foundation in Python for security automation and scripting. Also brings practical experience in web development and machine learning, enabling a well-rounded, technically versatile approach to problem-solving. Eager to apply analytical skills and a self-driven lab-building mindset to a SOC Analyst role.

SKILLS

Security Monitoring & SIEM: ELK Stack (Elasticsearch, Kibana), Splunk, Sysmon, Winlogbeat, KQL

Network & Traffic Analysis: Wireshark, Nmap, Netcat

Offensive Security Tools: Metasploit, Kali Linux

Threat Intel & Analysis: VirusTotal, AbuseIPDB, MITRE ATT&CK Framework

Scripting & Automation: Python

Web Development & ML (secondary interest): React, Node.js, Express.js, TensorFlow, PyTorch, OpenCV, SQL

Operating Systems: Windows, Linux (Kali Linux)

Tools & Platforms: Git, GitHub, VirtualBox, VS Code, JWT

EDUCATION

Jain University, Bangalore, India

(Sep 2022 – 2026)

Bachelor of Technology in Computer Science | GPA: 8.1

CYBERSECURITY PROJECTS

Home SIEM Lab

github.com/ujjal5454/Home-SIEM-lab

- Designed and deployed a full home SOC lab using Elastic SIEM (Elasticsearch + Kibana) on Windows 11 with a Kali Linux attacker VM on an isolated host-only network.
- Configured Sysmon with the SwiftOnSecurity ruleset and Winlogbeat for centralized log shipping and endpoint visibility.
- Simulated real-world attacks (network recon, SMB brute force) and built Kibana dashboards to detect and investigate them, documenting findings in professional incident reports.

Technologies Used: Elasticsearch, Kibana, Sysmon, Winlogbeat, VirtualBox, Windows 11, Kali Linux

Phishing Email Analyzer

github.com/ujjal5454/phishing-email-analyzer

- Built a Python-based tool to automatically analyze suspicious emails for phishing indicators.
- Integrated VirusTotal and AbuseIPDB APIs to check URLs, attachments, and sender IP reputation in real time.
- Streamlined manual triage into an automated workflow suitable for SOC-style phishing investigations.

Technologies Used: Python, VirusTotal API, AbuseIPDB API

Network Reconnaissance Detection Lab

github.com/ujjal5454/network-recon-detection-lab

- Simulated network reconnaissance attacks using Nmap and Netcat from a Kali Linux attacker machine.
- Detected and analyzed recon activity through firewall log data using KQL queries in Kibana.
- Mapped detections to relevant MITRE ATT&CK techniques and documented the full attack-to-detection workflow.

Technologies Used: Nmap, Netcat, Kibana, KQL, MITRE ATT&CK

OTHER PROJECTS

Police App: Designed a role-based access system for users, administrators, and law enforcement personnel with JWT authentication and real-time case tracking. (React.js, Node.js, Express.js, MongoDB, JWT, Git)

Face Recognition Attendance System: Built an automated attendance tracking system using OpenCV and facial recognition, logging results to CSV with timestamps. (Python, OpenCV, face_recognition, datetime)

CERTIFICATIONS

Linux Fundamentals — Learn Quest / Coursera (March 2023)

C for Everyone: Structured Programming — University of California, Santa Cruz / Coursera (January 2023)

Autodesk Fusion 360: Integrated CAD/CAM/CAE — Autodesk / Coursera (July 2023)

Introduction to Interactive Programming in Python — Rice University / Coursera (May 2023)
